

Assignment no 2

Introducing Relational Databases.

3) What is another word for row? For column?

ANS- The another words for row are tuple, entity and opportunity.
And for Column - key, Attribute and method.

4) Why isn't it possible to see the first five rows of a table?

ANS- Most of the RDBMS support distributed database. In RDBMS, table is not a file every row is a file. When we insert a row in the table, it finds the free space in the DB server HD, and its stores the rows in DB server HD. so it's impossible to see the Fisrt five rows of a table.
